

## What We Do?

Soshianest Enterprise Miner (SEM) is a modern software tool and has been particularly developed to be a platform and user-friendly vehicle for predicting complex and highly volatile markets like shipping. Algorithmically architecture to address forecasting needs of stakeholders in shipping industry. This software utilizes modeling techniques, such as metaheuristic algorithms, time series, etc. SEM is a quick and easy way to generate predictive models. In a semi-automatic procedure, first, we analyze/visualize and transform data, select variables, and then build models by using enhanced algorithms. From there we select the best predictive model and deliver the result in different user-friendly charts. Data Mining is an artificial intelligence powered tool that can discover useful information within a database. AI and machine learning is the nontrivial extraction of implicit, previously unknown and potentially useful information from data.

Statistical methods are used that enable trends and other relationships to be identified in large databases. Therefore, with utilizing data mining applied methods and Artificial Intelligence algorithms based on the Deep Learning & bagging and Neural Network, we were able to predict freight rate within acceptable range.

"Shipping Market Prediction"*

## Our mission

Soshianest aspires to provide the highest quality of market prediction reports to a wide range of clients in all sectors of the marine industry. This is done by using enhanced academically proven Scientific approaches and AI (artificial intelligence) to convert the raw data of the market into insightful customized market reports.

## Our Values

### Integrity

Soshianest is a company built on long-term relationships and trust. From the start to end we hold our selves responsible to 'do the right thing' because we understand the value of practicing ethics in the business. We say what we mean and stand by those words, always taking responsibility for our actions.

### Fairness

Every person and business we encounter is treated equally. We are fair to our clients, in the terms we propose and the level of service each party can expect. As a company, we focus on reinvesting profits in training and development, even through the downturns, supporting every client/partner to fulfil their potential.

### Excellence

For us, Excellence is not only a value; it is a discipline. High quality work and service are what we focus on here in Soshianest. We aim to excel in every way so we can help our clients achieve their objectives, no matter how challenging, by applying our unrivalled breadth, reach, experience and expertise to each project. We deliver innovative solutions to complex problems and our challenge is to exceed our clients' expectations at all times, on every aspect of every project.

## Meet Our Founder

### Dr. Payman Eslami

Dr. Payman Eslami the founder and director of Soshianest, has over 25 years of experience in the Shipping industry. His portfolio covers various engineering roles including working with shipyards in South Korea and Canada and being involved in shipbuilding projects with companies such as Fred Olsen Energy based in Norway. During his career, he was interested to integrate his studies and work experience to develop and provide solutions for the marine industry. As he recognized the challenges of future planning due to the volatility of this market, he focused his Ph.D. study to determine and implement an enhanced up to date technology-based platform for forecasting. To help decision-makers using this platform in addition to their experience on a daily basis.
